

# ROOFING PERMITS

The following changes will become effective July 29, 2002

## Tile Roofing Systems

Roofing permit categories 93 and 94, mechanically attached tile and mortar/adhesive set tile respectively, will be replaced by a single category 107 that will cover both types of tile installation.

## Light Weight Insulating Concrete

A special inspector will be required for placement of lightweight insulating concrete (new construction and re-roofing). A special inspector report must be submitted for final inspection approval.

## REROOFING

A building permit category 106 "*Light Weight Insulating Concrete*" will be added to all reroofing permits involving the placement of this material. Permit 106 must be secured as a subsidiary permit to the roofing permit.

Application for reroofing of existing buildings other than Group R-3 occupancy (single family dwellings and duplexes), not involving a change in the roofing system or recovery applications must include a statement as follows:

I attest that the proposed roofing system is an exact replacement of the existing roofing system. I also attest that existing overflow drains and/or scuppers are sized so that no more than 5" of water will accumulate on any portion of this roof, should the primary drainage system be blocked. 1616.2 FBC

☐ Architect ☐ P.E. ☐ Roofing Contractor

Roofing permit applications, in other than Group R-3 occupancy, involving a change in the roofing system and recovery applications must include signed and sealed calculations for the supporting structure, FBC 1519.5.3.1, and a statement as follows:

I have reviewed the structural and drainage adequacy of the existing roof structure with regard to the proposed roofing system and hereby approve the installation as proposed.
